Complete Turnkey solutions for
Instant Mix & Frozen Food
Processing & Packaging

COMPANY OVERVIEW

SSalvin Industries is a trusted engineering, consultancy, and turnkey project execution company specializing in Instant Mix and Frozen Food Processing Plants. We offer complete end-to-end solutions, from concept development and process design to machinery selection, installation, automation, and packaging systems, helping businesses build modern and efficient food manufacturing facilities.

With extensive industry expertise, we focus on delivering customized solutions that ensure operational efficiency, product consistency, hygiene, and long-term scalability. Our advanced processing technologies and engineering excellence enable manufacturers to achieve superior product quality while optimizing production performance.

Our comprehensive services include plant layout design, process consultancy, equipment integration, commissioning, quality assurance systems, cold storage solutions, and technical support. Through our turnkey approach, we help businesses establish reliable, food-safe, and profitable Instant Mix and Frozen Food manufacturing operations with confidence.

INSTANT MIX & FROZEN FOOD PROCESSING FLOW

INSTANT MIX & FROZEN FOOD MANUFACTURING PLANT

Key Features

- Fully Automated Production
- Hygienic Food Grade Design
- Precise Ingredient Mixing
- Consistent Product Quality
- Advanced Freezing Technology
- High-Speed Packaging
- Scalable Production Capacity
- Energy Efficient Systems

THE PROCESS

01 Mixing & Blending

The manufacturing process begins with receiving and storing high-quality raw materials such as grains, spices, vegetables, dairy ingredients, and food additives under controlled conditions.

02 Sieving & Screening

Ingredients are accurately weighed and blended using advanced mixing systems to achieve consistent taste, texture, and nutritional value.

03 Cooking / Processing

The blended ingredients undergo controlled cooking, roasting, steaming, or processing depending on the product requirements.

THE PROCESS

04 Cooling / Freezing

Products are rapidly cooled or frozen using advanced freezing technology to preserve freshness, taste, and nutritional quality.

05 Quality Inspection

Products undergo rigorous quality checks to ensure compliance with food safety and industry standards.

06 Automatic Filling & Packaging

Finished products are packed using automated packaging systems ensuring accuracy, hygiene, and attractive presentation.

THE PROCESS

07 Metal Detection

Metal detection systems remove contaminants and ensure product safety.

08 Cartoning & Palletizing

Packaged products are automatically packed into cartons and palletized for efficient transportation.

09 Finished Product Dispatch

Products are stored in controlled warehouse conditions and dispatched while maintaining quality and freshness.
